06:00	09:00	12:00	15:00	18:00	21:00
Light snow	Dull	Cloudy	Light rain showers	Sunny intervals	Partly cloudy (night)
Precipitation probability					
80%	30%	20%	30%	20%	10%

Forecast for Monday 12 Apr 2021

Weather: Conditions will be poor through the early morning; cold and cloudy with sleet and snow expected across the area. Snow will turn increasingly to sleet and rain at all levels during the morning, whilst also becoming drier. The afternoon will be brighter and largely dry with the risk of an isolated rain or sleet shower. Remaining cold throughout.

Chance of cloud free mountain/hill tops above 600m: Less than 10% becoming 90% by the afternoon.

Visibility: Visibility will be very poor first thing with widespread cloud bases 300-600m in sleet and snow. It will improve slowly through the day as cloud bases lift and break up to above 1000m by mid-afternoon, though any afternoon showers could see patchy cloud at times to around 800m.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A cold and wet start will mean you will need waterproofs and layers first thing as it will feel quite wintry. Although it will be a brighter afternoon, it will be quite variable so dress sensibly and wear sun protection.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Mon 12 Apr 2021	0.2mm	0.8mm	5mm

Forecast for Tuesday 13 Apr 2021

Weather: A much brighter day is likely through Tuesday. The best of the sunshine will be first thing, with more cloud and the odd shower developing by late morning across the area. In the sunshine it will feel much more pleasant than recent days, though still cool on hill tops. It will also still be a colder start and end to the day with patches of frost and fog bringing poor visibilities for a time.

Maximum wind: South-westerly, becoming North-westerly by lunch time, 10mph with gusts 15mph.

Chance of cloud free mountain/hill tops above 600m: 100%, but 80% from mid-morning.

Visibility: Generally very good visibility is likely through the day. Though it may be poor in valleys, at the start and end of the day, in any fog. Visibilities will also suddenly drop to poor temporarily in showers as cloud bases drop to 700-900m.

Temperature: **Valleys:** Plus 2 Celsius increasing to Plus 8 Celsius.
At 600m: Minus 1 Celsius becoming Plus 3 Celsius.
Freezing level: 1000m.
